VisualMill in Education

The Department of Technical Studies for The College of New Jersey selects VisualMill

For Immediate Release
December 10, 2001

Irvine, California - MecSoft Corporation, developers of VisualMill announces the implementation of VisualMill NC Programming systems in the Department of Technical Studies at The College of New Jersey. This program is part of the Design and Technologies in Schools Program developed by Parametric Technology Corporation and the National Coordinating Center at The College of New Jersey.

The PTC/TCNJ Design and Technology in Schools Program is well underway with teachers all across North America participating in workshops around the country. Regional Training Centers are being developed, mostly within teacher education programs at universities and college in the US and Canada. The College of New Jersey's students are now provided a method to complete the entire "Design through Manufacturing Process" by utilizing the strengths of PTC's Pro/DESKTOP for design and VisualMill for manufacturing.

Selection of a manufacturing tool for The College of New Jersey involved many key factors, the highest most important ones being functionality and ease of use. VisualMill accomplishes this very well with its easy to use interface, data compatibility and powerful NC programming capabilities
