MecSoft Announces RhinoCAM & RhinoART for Rhinoceros 4.0

Irvine, CA – March 1, 2007: **MecSoft Corporation**, developer of industry leading CAM solutions announced today the release of **RhinoCAM™** and **RhinoART™** plug-ins for **Rhinoceros 4.0**.

Rhino 4.0 is the most significant upgrade in the history of Rhino, with hundreds of new features and enhancements. Most significant among them are improved modeling tools, including highly expanded mesh modeling and editing, new translators including **Solidworks™** file loading, advanced display & rendering and 2D geometry tools.

RhinoCAM is ideal for mold, tooling & die, wood working rapid-prototyping and general machining. This product packs powerful toolpath generation strategies coupled with tools for efficiently controlling the cutting tool for detailed machining capabilities, while not sacrificing ease of use. It offers all basic CAM functionality as well as additional features suitable for demanding users with sophisticated manufacturing needs.

RhinoART can transform any 2D bitmap image into a beautifully sculptured native Rhino 3D geometry. This geometry can then be used as is or can be manipulated using Rhino's powerful modeling tools to create complex designs with minimal effort.

Together these three products bring to the desktop unparalleled geometry creation and machining capabilities all in one fully integrated environment. Due to the richness of the combined feature set, users will find this combination a one-stop solution for all their CAD/CAM needs.

For more information, please call (949) 654-8163 or visit RhinoCAM's website at www.rhinocam.com or MecSoft's website at <http://www.mecsoft.com>.

MecSoft Corporation is a leading provider of Windows®-based CAM software solutions for manufacturing parts in a wide variety of industries, including automotive, mold & die, aerospace, general machining and education.

Founded in 1980, Robert McNeel & Associates (RMA) is a privately-held, employee-owned corporation providing technical professionals with productive tools shaped from emerging technologies. RMA has regional offices in Latin America, Europe, and Asia.
