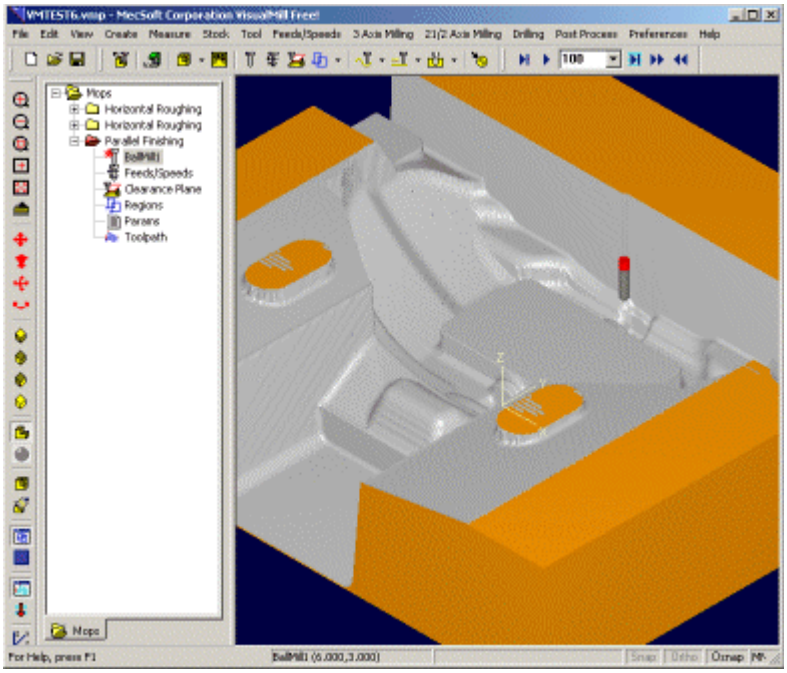
MecSoft announces Free STL machining software!



Irvine, CA.—November 19, 2002 -- MecSoft Corporation, developer of the industry leading VisualMill CAM product announces the release of VisualMill Basic 3.0 STL today. VisualMill Basic 3.0 offers cutting edge performance at the cost of a download.

VisualMill Basic 3.0 is a fully functional 3D Milling package built from MecSoft's award winning VisualMill CAM package. This package includes basic 2½ axis milling, 3 axis milling, drilling and our exclusive "All-Post" technology. With this product you will be able to import STL part files, program cutter paths, run full cutting simulations and be able to output G code to your machine tool. Additionally, with our exclusive "All-Post" custom G code generator you will be able create your own post processors to tailor the output to any controller of your choosing.

Greg Haywood of MecSoft states "We have been trying to figure out how to bring our products to market with the least amount of overhead associated with it. Why not use an older version of our product as a marketing vehicle? This will not only be great for commercial users wanting to take a closer look before purchasing our flagship product VisualMill 4.0, but also for Educational institutions who now will be able to use this product in classrooms across the world with no additional associated costs. There are several competitors charging for this very same product, we are happy to give it away."

VisualMill Basic 3.0 STL and VisualMill 4.0 Demo are available for immediate download at www.mecsoft.com
