VisualXPORT for Inventor

Press Release

MecSoft releases VisualXPORT 2.0 for Inventor

Irvine, CA, December 6, 2012: [MecSoft Corporation](#), the developer of computer aided manufacturing (CAM) software solutions, has announced VisualXPORT 2.0 for Inventor.

VisualXPORT for Inventor is an integrated plug-in for Autodesk's Inventor allowing users to transfer Inventor geometry directly to VisualMILL without having to go through a neutral format such as STEP or IGES. The solution provides an enhanced workflow for companies that design in Inventor and use VisualMILL in their manufacturing process.

"A number of our VisualMILL customers are using Inventor and need enhanced export capabilities beyond the traditional 3D DWG, STL, IGES and STEP formats. VisualXPORT for Inventor meets this need," stated Uday Honnalagere, Support Manager for MecSoft. "We're excited to offer this new release of VisualXPORT for Inventor that offers enhanced capabilities including the ability to export solids and surfaces as NURBS surfaces."

VisualXPORT 2.0 for Inventor can be used to export 2D & 3D Sketches (curves), solids with combined faces, solids with separate faces and individual surfaces. It is certified to run inside Autodesk Inventor versions 2009 through 2013.
